

Project planning, advice and management

CNC Project Management has a multi-disciplinary team of Project Managers who lead and deliver practical outcomes for our clients.

We adopt a staged approach to project delivery based on clear objectives, agreed milestones and approval gateways. We often work with clients to help refine a project scope at the outset.

For longer-term projects, we work side-by-side with our clients to scope each stage individually. This enables us to assess risks and opportunities as new information arises, and it provides clarity and certainty for future stages.

CNC can take a client's vision for the infrastructure project and find the optimal site or alignment. We provide options that balance constraints and opportunities to help make informed decisions.

Under the leadership of our experienced Project Managers, CNC is able to deliver centralised reporting and procurement. This helps us to better overcome project risks, gain efficiencies and ease often time-consuming procurement processes for our clients.

Our Project Managers have the following important skills:

- **Subject matter knowledge** - We pride ourselves on understanding our clients' needs and the industries in which we work. Our Project Managers have well-rounded technical know-how and experience. As a result, we ask the right questions and make sound decisions
- **Robust tools and techniques** - We draw on proven project and program management methods, tools and templates. These tools enable us to bring different teams together to produce cohesive, high quality deliverables
- **Friendly and easy to work with** - It makes a difference when you work with great people and tackle day-to-day issues together. Our Project Managers are excellent listeners. We communicate clearly and consistently.

OUR PROJECT MANAGEMENT SERVICES:

- Project conceptualisation
- Strategy and problem-solving
- Overseeing options analysis and technical design
- Specialist studies
- Constraints studies
- Health and safety
- Cost control
- Scheduling
- Contracting and procurement
- Quality assurance
